salsa

small farms
small food businesses and
sustainable food security

SALSA is a transdisciplinary project supported by the European Commission in 8 European and 4 African countries under the umbrella of HORIZON 2020

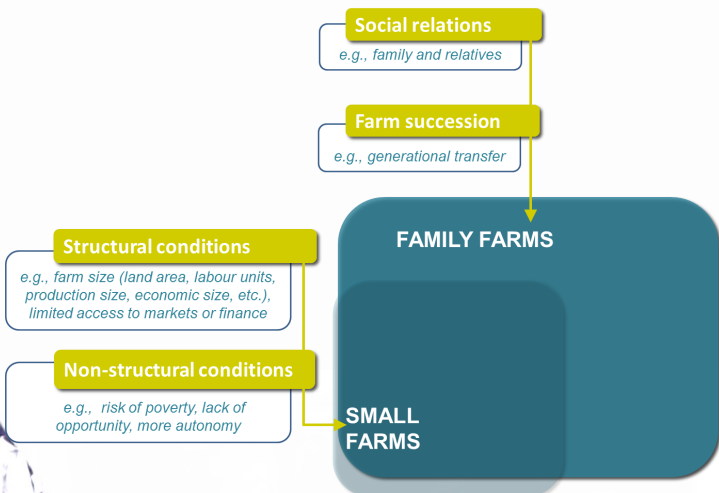

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 677363

About SALSA

- SALSA aims to provide a better understanding of the current and potential contribution of small farms and food businesses to sustainable food and nutrition security (FNS).
- SALSA pioneers a novel integrated multi-method approach in 30 regions in Europe and Africa, using the most recent satellite technologies, transdisciplinary approaches, food systems mapping and participatory foresight analysis.
- SALSA recognises the tremendous diversity of small farms and food systems in Europe and Africa, and pays particular attention to their vulnerability and resilience.

- SALSA examines relevant governance systems related to the organisation of small farmers and food chains, and provides tools to guide decision-makers in enhancing the contribution of small farms and food businesses to food and nutrition security.
- SALSA pays particular attention to an effective collaboration and exchange between European and African research and practice partners, thereby supporting the implementation of the EU-Africa Dialogue.
- SALSA effectively engages with stakeholders and decision-makers relevant to small farms and food and nutrition security, and facilitates a dialogue that cuts across classical boundaries in research, policy and practice.

- SALSA takes a food systems perspective in understanding the role of small farms and small food businesses for household, rural and urban food security. SALSA also seeks to understand the role of small food businesses and other key actors in their ability to remain integrated in regional markets and therefore to maintain and enhance their contribution to FNS.
