PROJECT NAME: trans4num: Transformation for sustainable nutrient supply and management

PRACTICE ABSTRACTS

- PA Green fertilizers: Lucerne and clover pellets for winter wheat
- PA Grass-based cropping systems: Transforming the Danish agricultural landscape
- PA Regional scale satellite monitoring
- PA From grass to value: Refining green biomass for protein and nutrients
- PA Circular systems in action: Cascade utilization and industrial symbiosis
- PA Cultivating innovation – trans4num INSPIRE Hackathon highlights
- PA Nature-based solutions for insect pest management
- PA Soil carbon stewardship and nature-based solutions: Managing soil organic carbon.
- PA AGRIFUTURE: Innovating crop rotations & soil health on clay soils.
- PA AGRIFUTURE: Innovative crop strategies for seed potato cultivation
- PA Plant-based fertilizer and natural crop protection in seed potatoes
- PA Planty organic: Long-term crop rotation with plant-based nutrition.
- PA Monitoring nature: Remote sensing as a key enabler of nature-based solutions
- PA Look into the soil to understand the benefits of NBS for soil
- PA Fostering population growth of Kestrel (Falco Tinnunculus) in agricultural areas
- PA Small actions in light of transformation
- PA Cut-and-carry green manure: Opportunities for plant-based nutrient management in potato systems

PROJECT DELIVERABLES

- D1.1 Report on Conceptual Grounds and Common Understandings
- D1.3 Report on interdisciplinary conceptual and methodological approaches
- D1.5 Report on interdisciplinary conceptual approaches – update
- D1.6 Report on transformation pathways
- D2.1 Online inventory of promising NBS relevant for study sites
- D2.2 1st report on NBS cases implementation and transdisciplinary evaluation
- D3.1 Protocol for data requirements
- D6.1 Data Management Plan and IPR Guidelines
